

# Slurry Agitator Pumps

## Super and Mega Contractor Models

The MAJOR range of Super and Mega Agitators are efficient slurry pumps designed with the larger farmer and contractor in mind. They create enormous pressure to give phenomenal mixing power and slurry output.

The three point linkage design with quick hitch attachment allows the PTO to remain connected during transport and in and out of slurry pits. The diverter box design allows for efficient flows for both mixing and top filling, helping to keep fuel costs to a minimum.

### Features

- ✓ Quick attach lower linkage
- ✓ 310 degrees of horizontal adjustment with spring loaded lock
- ✓ Marine bearing with easy access for maintenance
- ✓ Chopper blade
- ✓ Fully galvanised body and frame
- ✓ Rögelberg gearboxes with a 1¾" input shaft

The mixing head can be raised above the horizontal plane, to reach further up the tank.

It can also be lowered to the tank floor, towards the pumps intake propeller.

It brings the full jet of slurry with it as it is adjusted up and down and through every position, to a radius of 100 degrees. All adjustments are easily carried out, even while working at high pressure.
