

KRONE XDisc 620

SmartCut for stripe-free cuts

With some mowing discs turning in pairs towards each other and others turning away from each other, it was necessary to redesign the degree of blade overlap to ensure cleanest swaths. For a stripeless swath, we have therefore increased blade overlaps on the cutter blades turning outwards between the discs turning away from each other. In addition, the blades turning to the rear are set further apart to encourage a smooth flow of large volumes of crop.

Changing blades in an instant

Quick-change blades are a must for many farmers and contractors, because this way they can replace blades quickly and easily on the site.

Clean cut

The hydraulic side knives (option) sever tangled crops effectively. This ensures low losses when harvesting a number of whole-crop silage mixtures.

Powerful throughput

The powerful and massive 900 mm diameter feed auger works trouble-free even in dense and tall crops. It pivots freely and can be reversed. The auger flights have replaceable Hardox steel wear plates.

Safe road travel at up to 40 km/h

The XDisc is placed quickly and easily on the bespoke trailer. The integrated brake system ensures safe travelling.

Speed is of the essence

Fitting and removing the XDisc is quick and easy. With the rolls of the quick coupling, the harvester moves under the tubular frame of the XDisc. The spring-loaded quick coupling for the drive and the hydraulic locking device are available as options and increase the operator convenience.
